Shaft Guide

Welcome to Our Shaft Guide!

This guide provides specifications for the shaft options available with our iron builds. Remember, recommended swing speeds are just that—recommendations. If you're between speeds or unsure which flex is right for you, reach out and we'll help you find the perfect fit.

About Our Shaft Selection

We exclusively use parallel tip shafts (.370") for our iron builds. While lighter weight taper tip options exist, we currently focus on these premium KBS shafts that offer exceptional performance and consistency across all skill levels.

We're constantly expanding our shaft options based on customer feedback and the latest technology, so check back regularly for new additions.

Custom Shaft Options

Looking for a shaft that isn't listed here? No worries! You can purchase our iron heads separately and have them built by a professional club fitter with your shaft of choice. We're here to support your perfect build, however you want to do it.

STEEL SHAFTS

KBS TOUR (STOCK OPTION)

FLEX	RAW WEIGHT	RECOMMENDED CLUB HEAD SPEED (7 IRON)	TIP DIAMETER	LAUNCH & SPIN
Regular	120g	70-80 MPH	.370"	Mid/Mid
Stiff	130g	80-90 MPH	.370"	Mid/Mid

Understanding Launch & Spin

Mid/Mid: Balanced launch and spin characteristics that work for the majority of golfers. This profile delivers consistent distance and control across a wide range of swing types.

Choosing the Right Flex

Regular (120g): Best for smooth, controlled swings with 7-iron speeds of 70-80 MPH. Offers optimal feel and feedback for moderate swing speeds.

Stiff (130g): Designed for more aggressive swings with 7-iron speeds of 80-90 MPH. The additional 10g provides stability and consistency for faster swingers.
